

GENERATION PGM

News Brief

Community Updates and Programs

Generation PGM Inc. (GenPGM) would like to thank the communities and individuals that have expressed support for the Marathon Palladium-Copper Project while we progress through the public review period of the Environment Assessment. The Joint Review Panel recently announced the extension of the public comment period to July 26, 2021.

On June 1, 2021, GenPGM participated in a Public Information Session hosted virtually with the Town of Marathon to provide updates on the Project and the Environmental Assessment process. We would like to extend a sincere thank you to the participants and the Town of Marathon. Despite public health restrictions preventing in person open house meetings, our virtual session provided the opportunity for commentary and questions, and we look forward to incorporating your suggestions into the Project as we move forward.

We are actively looking for ways to include local community members to participate in terrestrial studies, water sampling and other monitoring programs. GenPGM recently conducted additional terrestrial field program focussed on birds and species at risk along the proposed access road to the mine site. If this opportunity interests you, check in to our Community Board in front of the Operations Office at 90 Peninsula Road in Marathon for updates on upcoming field programs throughout the summer or email us directly at comments@genpgm.com.

We look forward to providing the opportunity for interested members of local and regional communities to participate in our field programs throughout the summer!
